

Single Axis Tracking Systems With RST CleanTech

When your panels get soiled, you can lose up to 30% of your production. Tracking systems produce more power per panel and therefore stand to gain more when they are clean. Don't settle for fixed-tilt production on your tracking system!

RST CleanTech's flexible design makes it a perfect fit for single-axis tracking systems. Better yet, RST can provide significant value because we eliminate soiling on high-producing panels. Minimize Soiling and Maximize Production!

Optimize Production

Keep your panels clean to avoid soiling losses and optimize energy production up to 30%.

Protect Warranties

We do not use detergent or any abrasive materials, and we wash at night to reduce thermal stress on the panels – protecting your panels and your panel warranty.

Reduce the Hassle

The system is fully automated – eliminating the hassle of having to schedule cleanings. Control cleanings from the RST phone app.
