

PROJECT TYPE:
Residential

SYSTEM TYPE:
25 panels @ 15° tilt

LOCATION:
Santa Ana, CA

WORRIED ABOUT PEOPLE ON YOUR STEEP ROOF?

- Avoid liability of people getting hurt and injured on your steep roof.
- Show off your clean panels – and show neighbors how to maintain solar panels.

We have had RST on our solar panels for over a year now. Our roof is steep, and previous cleaners were tearing up the shingles. The cleaners also made me nervous with unnecessary risks – I don't want anyone to get injured at my house. And because of the steep roof, our neighbors can easily see our panels. I love that my panels are always a clean black, especially since we are next to the freeway. The neighbors ask how I keep them so clean! Best of all, our true-up bill has basically been eliminated due to RST. I would highly recommend RST.
